

Physical Entity–Relationship Diagram

Columns are grouped for readability; migrations 001–008 define complete types and constraints. The free-form layout assigns a separate corridor to each principal business FK. Repeated user_id/user_key ownership FKs remain declared inside table boxes instead of becoming long crossing edges.

Relationship cardinality
One bar = exactly one (1)
Circle + bar = zero or one (0..1)
Circle + crow's foot = zero or many (0..N)
Dashed = nullable / loose reference

Repeated ownership links to USERS are written in each table box instead of being drawn across the canvas. The two wallet-transfer roles use separate corridors; BACKUP_CONFIG is shown explicitly as the sole 1:1 relationship. Fill colors distinguish profile/operations, deterministic ledger, planning/recurring and LLM-related data.
