

Classification Feedback and Personalization Flow

Corrections are retrieved as context; the system does not fine-tune and only re-tags after the user confirms a TTL-bound plan.

Color Legend

- Step that calls the LLM
- Deterministic computation on stored data
- Data state and user interaction
- Data write in one transaction
- Cancel/expiry branch with no write

Responsibility-zone Legend

- Zone 1 · retrieve corrections
- Zone 2 · confirm and store feedback
- Zone 3 · propose categories and re-tag
